CONCLUSION

Currently, tourism infrastructure in A Luoi district is increasingly invested and improved, such as the upgraded road system, making travel to tourist destinations more convenient. The development of tourism activities in recent years has had a significant impact on the lives of people in A Luoi district in terms of economic, social and environmental aspects.

Tourism has brought positive impacts such as contributing to the economy of A Luoi district, to tourism revenue of Thua Thien Hue province; People's income is increased; Spiritual life is improved and enhanced; Create many jobs during leisure time; Cultural level is increasingly improved; Participate in training to improve communication and behavioral culture; The relationship between family and community since tourism activities have become closer, closer and more connected; Households have signed commitments with local authorities on environmental protection and forest resource protection; Waste from tourism activities is collected and treated regularly; At tourist attractions, there are always tools and items such as trash cans, trash bags, and signs with regulations on environmental protection for tourists.

However, besides that, there are also some negative impacts such as people's income is increased but not large, in which income from agricultural and forestry production is still the main one; Social evils have increased compared to before; The amount of solid waste during the tourist season increases dramatically, causing negative impacts on the environment; Natural landscapes have been renovated, water and air quality are adversely affected during peak days.
